

Implementation Support

Making your Hull Integrity Management system effective

Purpose

Implementing a new system is a challenge for any shipping organization.

Shortage of personnel and lack of priority is often the reason for failure in such implementation processes.

However, fully utilizing the system will enable a shipping company to gain business advantage, and outpace others in the tough competition.

Features

DNV offers technical advisory services to assist ship operators to design and execute the implementation process of the Hull Integrity Management system within the organization.

The services focus on the following elements of the implementation process:

Capacity, commitment, resources, tools, technology, organization, process, monitoring and follow-up.

The services listed below are available either individually or as part of our Hull Integrity Management Implementation package:

- On board installation and training
- On shore installation and training
- Design and implement critical business processes and organization
- Design monitoring and follow up procedures
- Establish Best Practice
- Full running Hull Integrity on behalf of operators

Benefits

- Utilize DNV's leading hull knowledge and competence
- Utilize DNV's experience in implementing systems across organizations
- Learn from the industry's best practice
- Stay in full control of your fleets hull condition
